Energy Efficiency, First!

We knew already that energy efficiency was a fundamental pillar of any energy transition strategy we could imagine for the next thirty years. What we have urgently understood in the last couple of months, due to the critical scenario of energy provision and prices [...]

War in Ukraine remarks the need for the Energy transition

Although energy prices have been increasing since last year, in February there was a hint of some decrease that made us expect a kind of back to normality in the electricity markets, or at least a new stability of prices. However, the international political situation [...]

"Rebirth" of the East Med Pipeline?

The Russian invasion of Ukraine led Europe to move away from the current energy mix as quickly as possible. One of the priorities of the EU Repower EU project is the Diversification of gas supplies and working with international partners to move away from Russian gas, investing in the necessary [...]

Climate risk management: dealing with deep model uncertainty

In recent years, Climate risk estimation is becoming an highly investigated topic in quantitative finance: questions like "what's the risk of huge losses of an insurance institution due climate catastrophes in a given area?" or "how will a firm heavily reliant on fossil fuels react to [...]"
