Description of the Organisation

Université Paris-Dauphine, a public management university created in 1968, has a unique position in the French academic landscape: a university and a Grande Ecole rolled into one. It is a focused university, offering bachelors, masters, PhD and executive and continuing education, combining quantitative and qualitative training in Organisation and Decision-making Sciences.

Its mission is to be of service to society and to the globalisation of higher education by creating and disseminating knowledge in applied organisation sciences and by educating responsible managers and researchers open to diversity and to the world. Université Paris-Dauphine strives to combine the strengths of a university – education through research and for research – with the strengths of a business school – competitiveness and professionalisation of curricula.

Its vision is to provide education of the highest quality in Business administration and Management Sciences, mathematics and computer sciences, to prepare students to face the challenges of today and to confront the complexity of a globalised world Paris-Dauphine is a founding member of Paris Sciences & Lettres Research University (PSL) developing a unique and innovative pedagogy based on transdisciplinary approaches combining science, humanities and social sciences within teaching and research at all levels of study.

Role of the Organisation in the project

Université Paris-Dauphine is the lead organization of the dissemination and exploitation WP11. The dissemination activity will take place during the three years of the project, with continuous diffusion of the results. The aim is the raise awareness on the need of new training proposal in the field of Green Energy and to inform about the effective results of the project. The communication activities of the dissemination will be realized through activities organized during the project lifetime and represented by meetings (workshops/summer schools-training/full-immersion experience) and public presentations of the project at important university/business forum and by the Virtual Workspace, the project website, the websites of the institutions involved, the connection to the relevant local networks and the related KICs, press releases, promotional material, brochures, the participation to thematic conferences and the meeting with groups of potential stakeholders.

Moreover Université Paris-Dauphine will keep in attracting excellent students for their master studies and this project will benefit from the high quality of the students admitted in these master tracks. UPD will support the exchanges of students by providing facilities for housing on its campus or access for French lessons (whenever useful).

Contact Person's Experience and Expertise

His main research areas are economics of power systems, price modeling, and investment decision. Since September 2016, he is full professor of financial economics at Université Paris-Dauphine. Before this appointment, he worked more than 15 years at EDF R&D taking several managerial positions and being the Deputy Head of EDF R&D Osiris department (generation management, load forecasting and risk management).

Prof. R. Aid often gives lectures, for example in MSc program at University Paris Dauphine, in Winter School in Padua in 2016, in executive training in Energy Management in Ecole Polytechnique.
